

DIGITAL TRANSFORMATION IN ACCOUNTING FIRMS

Solving Communication and Document Management Inefficiencies

CHAPTER 1: PROBLEM & PROJECT BACKGROUND

Modern accounting firms are drowning in “App Fatigue.” Despite having digital tools, data is scattered across emails, Slack, local drives, and legacy portals. This leads to Information Assymetry (where the team doesn’t know what the client sent) and Document Latency (time lost searching for files).

- SLOs:
- Centralization: Reduce document retrieval time by 40%.
 - Response Speed: Lower client inquiry response time via integrated portals.
 - Security Compliance: Ensure 100% of documents are stored.
 - User Adoption: Achieve a 90% staff adoption rate.

CHAPTER 2: RESEARCH & REVIEW

41% firms still struggle with integration challenges.

Current systems lack Contextual Communication

Using AI to categorize documents upon upload.

Methodology: The 5-Step Sprint

RESEARCH
Conducting surveys

PROBLEM ANALYSIS
Identifying common issues

WIREFRAMING
Designed system

PROTOTYPE DEVELOPMENT
Created digital mockups

EVALUATION & TESTING
Collected user feedback

CHAPTER 4: EXECUTION & SOLUTION

Productivity Improvement

User Satisfaction Survey

Most Useful Features

- ✓ Improved Communication
Faster and more organized interaction between accountants and clients.
- ✓ Increased Efficiency
Reduced manual workload and repetitive tasks.
- ✓ Better Client Experience
Clients can easily access updates and records.
- ✓ Enhanced Organization
Documents are stored securely in one platform.

CHAPTER 5: CONCLUSION
